

# Help your Client Travel Consciously with Qatar Airways

**Reduce the carbon footprint for your corporates by offsetting their carbon emissions with us**

Dear Valued Partner,

Qatar Airways is pleased to expand its voluntary carbon offset program to all our Beyond Business corporate customers where they can now offset or reduce Carbon emissions associated with their company's travel in bulk for past and future Qatar Airways flights, booked through all booking channels.

With this, they can work towards their sustainability goals while they collaborate with us to advance their carbon neutrality goals.

Built on a partnership with the International Air Transport Association's [IATA], this new programme uses the IATA industry best practice for calculating CO2 emissions.

It has been designed to simplify the process for our corporate customers, offering them innovative solutions towards achieving their environmental commitments on climate change. Initial emissions will be offset with a leading renewable energy project with additional verified projects to be included in the near future.

Since 2020, the Qatar Airways' Voluntary Carbon Offsetting Programme has been contributing to the Fatanpur Wind Farm project located in the central Indian state of Madhya Pradesh; this consisting of 54 wind turbines, which generate a combined output of 108 MW, and avoids 210,000 tonnes of greenhouse gas emissions per year.

As one of the world's leading airline and a part of the oneworld® Alliance, Qatar Airways is committed in its efforts collaborate with the industry stakeholders to address carbon emissions, and allow its customers to easily incorporate carbon-neutral business practices into their overall corporate strategy.
